

How much water does a leaky faucet waste?

Use the following formula to calculate the amount of water that dripped from your faucet in one day.

How many milliliters of water dripped in one minute?

_____ mL

_____ mL x .375 = _____ gallons per day

If you are measuring in ounces, use this formula:

_____ ounces

_____ ounces x 11.25 = _____ gallons per day

Here's how the simplified formula above was determined:

$$\frac{? \text{ milliliters}}{1 \text{ minute}} \times \frac{1440 \text{ minutes}}{1 \text{ day}} \times \frac{1 \text{ ounce}}{30 \text{ mLs}} \times \frac{1 \text{ gallon}}{128 \text{ oz}} = \text{_____ gallons/day}$$
